PROJECT Shopping mall Galeria Młociny Warsaw [PL]

COMPLETION May 2019

ARCHITECTS Broadway Malyan Architects

PRODUCTS

Raft ceiling dur-SOLO® Type 1 [approx. 120 m²]:

0.6 mm thick galvanized sheet steel, dimension [LxW]: 3600 x 1200 mm and 3600 x 300 mm, powder-coated in RAL 9016, perforated in L15, backed with black acoustic fabric

POLYLAM® vertical baffles [approx. 2,370 lm]:

0.6 mm thick galvanized sheet steel; different lengths between 2060 mm and 3180 mm, width: 50 mm, height: 100 mm, powder-coated in RAL 9016, partially perforated in L15, backed with black acoustic fleece and mineral wool

Numerous businesses, restaurants, a billiard and bowling facility and a fitness area: The Galeria Młociny shopping and entertainment centre in Warsaw, opened in May 2019, offers the right thing for every taste over a total surface area of 220,000 m².

Two durlum ceiling solutions were used in this modern new-build in the Polish capital.

Characterized by an almost weightless appearance, the dur-SOLO® raft ceilings blend effortlessly into the bright Food Court. The individual, white powder-coated rafts skilfully accentuate the lounge area and, with their fleece backing, contribute substantially to an improvement in acoustics. The different dimensions also enhance the open, airy character of this ceiling solution.

Another part of this five-floor building is showcased by the POLYLAM® design ceiling: the vertical louvres draw together the external and internal area visually, defining an elegant line with convincing clarity. Powder-coated in white, creating an apparently seamless transition between inside and outside. Partially perforated and backed with fabric, the baffles contribute towards pleasant room acoustics.

A harmonious ceiling combination in a shopping mall that invites you to enjoy retail therapy and letting time pass agreeably.
