# PROJECT OF THE MONTH | Siemens, Warsaw [PL]

02  
21

PROJECT	Siemens, Warschau [PL]
COMPLETION	2020
ARCHITECTS	APA Wojciechowski Architekci
INTERIOR DESIGNER	Massive Design Warsaw
PRODUCTS	<b>LOOP TYPE 2:</b> Aluminium; powder-coated in RAL 9016; deep-drawn perforation with a diameter of 60 mm; free cross-section >50%; area: 165m <sup>2</sup>

In 1847, just six years after founding what is now the international corporation of Siemens, work commenced on construction of a railway telegraph line from Warsaw to the Prussian border, the start of the company’s success story in Poland. A success story that continues to the present day.

In 2020, Siemens opened a new office building in the Warsaw district of Praga, planned around the concept of Activity Based Working. Our visually seamless LOOP design ceiling blends into this concept perfectly. It was used in the open-plan waiting areas and at reception, accentuating these through its organic shape.

Our very aesthetic, open metal ceiling is an integral part of the sustainable, harmonious and feel-good interior design which focuses on flexibilization and optimization of the working environment.
