

Altis Consulting

Sydney, Australia

The Project

Altis Consulting’s new Sydney headquarters combines modern architecture and design with functionality and a clear brand identity to create an inspiring workspace. Designed by studiobb and completed in 2024, the project aimed to create a high-end working environment that is both representative and comfortable.

In the main lobby, striking visual accents are created by custom-made S7 ceiling panels from durlum which feature a golden, perforated design. Initially, it was intended that concrete sections would remain exposed between the ceiling panels, but this did not achieve the desired effect. Therefore, durlum developed and supplied custom-fit infill panels that blend harmoniously with the rest of the metal ceiling. The result is an aesthetically pleasing, homogeneous metal ceiling that gives the lobby an elegant, modern look.

Another key element of the fitout is the open-plan “Town Hall” space, which stimulates communication and innovation. A metal ceiling solution from durlum was also used here, matching the lobby ceiling design perfectly. The tight plenum space posed a particular challenge, requiring a bespoke suspension system.

Thanks to precise planning and bespoke solutions, the result is an interior design that strikes the perfect balance between aesthetics and functionality. This modern workspace is characterised by quality, comfort and a clear design language.
