

RECOMMENDED CLEANING PROCEDURE

FOR DURLUM METAL CEILINGS

Cleaning advice: „Panels“

As standard, durlum ceiling panels are made with an electrostatic polyester powder coating, thus providing them with a long-term finish.

The powder-coated surface should always be cleaned first with a soft, dry cloth.

If dirt cannot be removed by this procedure, the cloth can also be moistened, with the addition of a pH-neutral cleaner [household detergent], if necessary.

Contact of the powder coating with both alkaline and acid substances must be avoided. Metallic powder coatings show a particularly sensitive reaction.

Due to the risk of a change in hue or effect, for metallic coatings a suitability test must be performed.

Please note: This cleaning advice is only valid for the panels on its own. In case any non-durlum products are built-in or attached, above cleaning advice is invalid.
