

RECOMMENDED CLEANING PROCEDURE

FOR DURLUM OPEN CELL CEILINGS – COIL COATED

Cleaning advice: „Open cell ceiling – coil coated“

As standard, durlum open cell ceiling are made of coil-coated steel, thus providing them with a long-term finish.

The coil-coating surface should always be cleaned first with a soft, dry cloth.

If dirt cannot be removed by this procedure, the cloth can also be moistened, with the addition of a pH-neutral cleaner [household detergent], if necessary.

Contact of the coil-coating with both alkaline and acid substances must be avoided.

Please note: This cleaning advice is only valid for the open cell ceiling on its own. In case any non-durlum products are built-in or attached, above cleaning advice is invalid.
